Yes the material is considered an OSHA. Hazardous chemical and is repotable on the Tier II form.
Yes DuPont does report the Tier II information each year as required under Section 312 of EPCRA.

Refer to Jhana's information on the amount.

The statute requires the facility to file the Tier II information. With the State, local planning officials (LEPC) and local fire department, which DuPont did. Local officials should share this information with appropriate. Response organizations.

In LaPorte, the local emergency manager is the coordinator for the LEPC.

No answer. Everyone stopped working on the questions when we got Jennah's msg. Susan is trying to reach Steve, but no luck yet. She will keep trying.

Pam,

Do we have the other answers? Is it a tier II chemical?

David

Subject: MSNBC QUESTION -- ON DEADLINE

Hello Mr. Mason:

My name is Rawan Jabaji. I'm writing you from MSNBC with a couple questions relating to the DuPont Chemical Plant and the leak in La Porte, Texas. It is for air for tonight. Below you will find my questions:

--Is the chemical that leaked at the plant – methyl mercaptan – a Tier Two chemical? If so, was it reported on the Texas Tier Two report?

--How much of the chemical – methyl mercaptan – was located at the DuPont Chemical Plant in La Porte, Texas?

--Do local 911 dispatchers get notified of Tier Two chemicals or generally hazardous chemicals in the area? If so, were they notified about the methyl mercaptan at the DuPont Chemical Plant in La Porte, Texas.

I tried calling the Texas Department of State Health Services and left a voicemail. As mentioned above, this is for air for tonight. Our show starts at 9 PM ET. Any help you can provide would be greatly appreciated.

Thank you,

Rawan Jabaji
